**For Immediate Release**

**National Interop helping the Seattle Police Department,  
Washington County Sheriff's Office, and Multnomah County  
Emergency Management with Communications Interoperability**

*The company announces three interoperability projects in  
the Pacific Northwest and a new Oregon facility*

**PORTLAND, Ore., Sept 21, 2007**– National Interop, Inc. announced today that the Seattle Police Department's Homeland Security Section (Seattle, Wash.) has selected National Interop to provide consulting on choosing interoperability frequencies for their communications equipment, including their MCV (Mobile Communications Vehicle).

The company also announced that the Washington County Sheriff's Office (Hillsboro, Ore.) has selected National Interop for a consulting project on using the local, state, and national interoperability frequencies. Earlier this year the sheriff's office acquired more than 100 VHF and UHF radios for use in responding to disasters and other emergencies, including Project25-compliant digital radios.

National Interop's Oregon office is moving into new, larger facilities near the Portland International Airport and the Oregon National Guard's Portland Airbase. The new facility can support multiple MCCV (Mobile Command / Communication Vehicle) projects at the same time.

The first vehicle project in the new facility is the addition of broadband internet satellite capabilities to the Multnomah County Emergency Management (Portland, Ore.) mobile command / communications vehicle. The satellite unit will provide up to 2 Mbps broadband internet capability for Multnomah County virtually anywhere in the county or region, enhancing the capabilities of the incident command staff. This can provide telephone, radio, and email connectivity during disasters and emergency events, regardless of the condition of the local telephone and Internet infrastructure.

## **About National Interop**

National Interop, Inc. serves public safety agencies by providing tactical and permanent communications systems. The company's staff includes current and former public safety first responders, VoIP, RoIP and network experts, land mobile radio technicians, and system analysts and designers.

The company offers consultation, construction and training services and creates communication systems that are flexible, economical, and scalable. National Interop, Inc. is privately held with offices in Seattle, Wash. Portland, Ore. Additional information is available at [www.nationalinterop.com](http://www.nationalinterop.com).
