National Interop, Inc. Opens Offices in Portland, OR and Seattle, WA

PORTLAND, Ore., March 1, 2005 – National Interop, Inc. announced today that it has opened two offices to serve its customers throughout the Pacific Northwest. The company operates its headquarters out of two locations: in downtown Portland, Ore. and downtown Seattle, Wash.

Both offices are staffed with technical experts as well as customer account managers.

National Interop is a systems integrator serving local fire, police, sheriffs, and other public safety agencies in the Pacific Northwest. The company specializes in the emerging technology of IP radio, also called RoIP (Radio over Internet Protocol). RoIP is a derivative of the VoIP (Voice over Internet Protocol) technology offered by companies such as Skype and Vonage for consumer telephone service.

Both of these technologies enable flexible, economical, high-speed, top quality voice transmission over the Internet instead of over traditional telephone lines.

“We are passionate about communications interoperability, and we have seen first hand that IP radio is a crucial ingredient in solving the problems of incompatible radios in public safety,” said David Billstrom, Chairman of National Interop.

The urgent need for radio interoperability among rescue crews has been underscored by the events of 9/11, Hurricane Katrina, and other emergency events across the nation. The need for interoperability is equally great for non-emergency situations faced every day by public safety agencies.

“We’re very excited that we’ll be able to better serve our customers and clients from our new offices,” said Billstrom.

About National Interop

National Interop, Inc. serves public safety agencies by providing tactical and permanent communications systems. The company’s staff includes current and former public safety first responders, VoIP and network experts, land mobile radio technicians, and system analysts and designers.

The company offers consultation, construction and training services and creates communication systems that are flexible, economical, and scalable. National Interop, Inc. is privately held with offices in Seattle, Wash. and Portland, Ore. Additional information is available at www.nationalinterop.com.
