National Interop, Inc. Achieves WAVE Certification

PORTLAND, Ore., Sept 1, 2005– National Interop, Inc. announced today that it has achieved certification in WAVE™ Radio over IP (RoIP) technology developed by [Twisted Pair Solutions](#). Twisted Pair's software based WAVE solution manages real-time, secure, group communications over the IP network.

As a result of following the rigorous curriculum offered by Twisted Pair Solutions, National Interop now has certified integration engineers (CIEs) and certified sales engineers (CSEs) to serve the needs of public safety agencies. In deploying the WAVE Radio software, National Interop can turn disparate and often incompatible communications technologies into a single, interoperable and manageable communications system.

"I am pleased to say that we are the first Twisted Pair marketing partner on the West Coast with certified integration engineers," said National Interop Chairman David Billstrom.

About National Interop

National Interop, Inc. serves public safety agencies by providing tactical and permanent communications systems. The company's staff includes current and former public safety first responders, VoIP and network experts, land mobile radio technicians, and system analysts and designers.

The company offers consultation, construction and training services and creates communication systems that are flexible, economical, and scalable. National Interop, Inc. is privately held with offices in Seattle, Wash. and Portland, Ore. Additional information is available at www.nationalinterop.com.
