David Chamberlain Joins National Interop, Inc.

PORTLAND, Ore., January 23, 2007– National Interop, Inc. announced today that David Chamberlain has joined the organization as company President. In this new role at National Interop, Chamberlain will work closely with CEO David Billstrom with clients at public safety agencies as well as to drive the technical evolution of the company's Internet Protocol (IP) radio communications technology.

Chamberlain was most recently chief information officer for the Bill and Melinda Gates Foundation, the world's largest charitable private foundation, where he managed the IT infrastructure. In addition, he also consulted with the various Gates Foundation programs to support technology needs, including communications challenges in remote, third world locations.

Chamberlain is also the former CIO (and Acting CTO) at Disney's GO.com portal (NYSE: DIG). Prior to GO.com, he was CIO and Senior VP of Technical Operations at Infoseek (subsequently purchased by Disney), and prior to Infoseek, he was VP of Technical Operations for Starwave. Among his responsibilities, Chamberlain built and managed the technical infrastructure used to launch and operate the GO.com portal, ESPN.com, ABCNews.com, NFL.com, NBA.com, MrShowbiz and other high traffic, dynamic content Web sites, all of which gave him expertise in provisioning bandwidth and network services to handle significant daily Internet traffic.

"The National Interop team is approaching public safety agencies with a holistic systems perspective," said Chamberlain. "They are leveraging innovations in IP technology to address core public safety communications interoperability and usability challenges and are designing and implementing reliable, non-proprietary, and affordable solutions that are truly best-of-breed."

"David Chamberlain is one of the top leaders in large-scale Internet operations," said National Interop CEO David Billstrom. "He has already made a significant impact to our expanding business."

About National Interop

National Interop, Inc. serves public safety agencies by providing tactical and permanent communications systems. The company's staff includes current and former public safety first responders, VoIP and network experts, land mobile radio technicians, and system analysts and designers.

The company offers consultation, construction and training services and creates communication systems that are flexible, economical, and scalable. National Interop, Inc. is privately held with

offices in Seattle, Wash. and Portland, Ore. Additional information is available at www.nationalinterop.com.
